The ELIA AG is refining E-Car!

To be quite honest, the Renault Twizy isn't actually a car, but rather an electric quad. In addition, the smartly designed two-seater does not have to worry about a lack of attention and sales figures.

With this in mind, our ELIA team has nonetheless discovered that a number of things would need to be optimized and have now developed a comprehensive program for accessories and tuning. This program includes 15 or 16 inch aluminum wheels with wide-ranging mud guards and – for further optical support – stainless steel parts that are completely polished and which give the Twizy a bit of an off-road look.

Accompanying this emotional enhancement, ELIA is now also providing practical accessories. Amongst these are professionally retrofitted plates with ABE for the semi-open Twizy, which is driven by many owners in all types of weather and even during the winter. The plates are lockable and can be attached and detached in a matter of seconds.

If you may also be planning on using the Twizy as a small packing mule of sorts, you can make use of the rear carrier system that is now available and provides multifaceted usage options regardless of whether they are commercial (i.e. for pizza deliveries) or private (i.e. moving drink bottles, sports equipment, etc.). For municipalities, special modifications are also possible, for example for garbage cans.
